Summary

Software developer from Colombia currently pursuing a degree in Systems and Computing Engineering at Universidad de los Andes. My main focus is web development and building scalable digital platforms using modern JavaScript frameworks and cloud technologies.

I have experience developing full-stack web applications, collaborative platforms, and interactive digital tools. I enjoy creating fast, intuitive, and resilient web experiences, and I am particularly interested in performance optimization and scalable architectures capable of handling large user traffic.

Alongside development work, I have experience teaching programming and mentoring students, which has strengthened my ability to communicate technical ideas and collaborate effectively in fast-paced teams.

Experience

Teaching Assistant – Computing Technology and Infrastructure

Universidad de los Andes

2025 – Present

- Assist students in debugging code, understanding memory management, and improving program performance.
- Evaluate technical lab submissions and provide feedback on code quality and documentation.

Teaching Assistant – Web Application Development

Universidad de los Andes

2026 - Present

- Assisted students in the development of semester-long web application projects using modern software engineering practices.
- Evaluated project deliverables providing feedback on implementation and code quality.

Content Developer – Stanford Summer Python Bootcamp (Uniandes + Pylatino)

2025

- Created and translated instructional material for a joint Uniandes–Stanford summer Python course.
- Designed interactive resources to teach algorithmic thinking and programming fundamentals.

Selected Projects

AndesEats – Restaurant Discovery Platform for University Students

<https://www.andeseats.co>

- Designed and developed a web platform to help students discover restaurants and food options near Universidad de los Andes.
- Built the frontend using modern web technologies and interactive UI components to improve usability and navigation.

ProTalker – AI Communication Assistant

Mid-career Engineering Project

- Developed an AI-powered communication platform focused on improving speaking confidence and conversational practice.
- Designed interactive features integrating conversational AI, real-time feedback, and user-centered interface design.

Community Involvement

Student Representative – Systems and Computing Engineering Department

Universidad de los Andes 2024 – 2025

- Elected representative supporting initiatives to improve academic and community life for more than 1,000 students.
- Coordinated student activities and events and collaborated with faculty to improve communication and engagement.

EA Game Development Hackathon Participant

- Participated in a university game development hackathon sponsored by Electronic Arts (EA).
- Collaborated in the rapid prototyping and development of an interactive game experience under tight deadlines.

Skills & Tools

Web	HTML, CSS, JavaScript, TypeScript
Frontend	React, Angular, Next.js
Backend	Node.js, Flask, Django
Version Control	Git, GitHub
Databases	PostgreSQL, MySQL, MongoDB
Cloud	AWS, Google Cloud, Firebase
Data & AI	Python, Pandas, NumPy, TensorFlow, Scikit-learn
Design	Figma, Unity, Blender, Adobe Suite

Education

Bachelor of Systems and Computing Engineering

Universidad de los Andes (Expected Graduation: July 2027)

Focus: Software Engineering, Web Development, and Machine Learning.

- Developing scalable software systems integrating web technologies and cloud infrastructure.
- Participated in academic projects involving embedded systems, AI, and full-stack web applications.

Minor in Design and Creation

Focus: Human-Centered Design, Prototyping, and UX/UI.

- Applying design thinking to create intuitive and visually coherent digital experiences.
